**CUSTOMIZE DATA
STORED IN THE CLOUD**

**DISCOVER VALUABLE LOSS
PREVENTION INSIGHTS**

**"ALWAYS ENCRYPTED"
WITH MICROSOFT SQL**

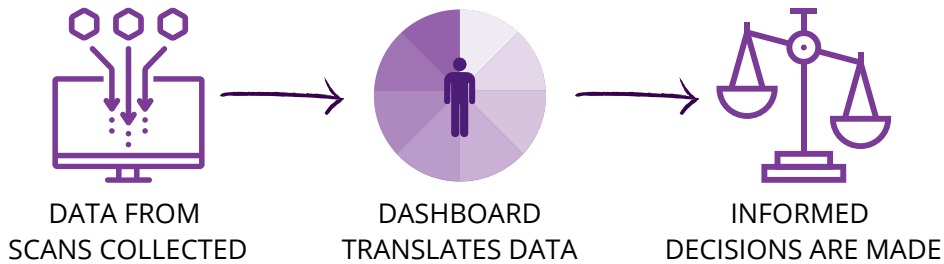

PALIDIN Enterprise

Secure Storage. Analytics Dashboards.

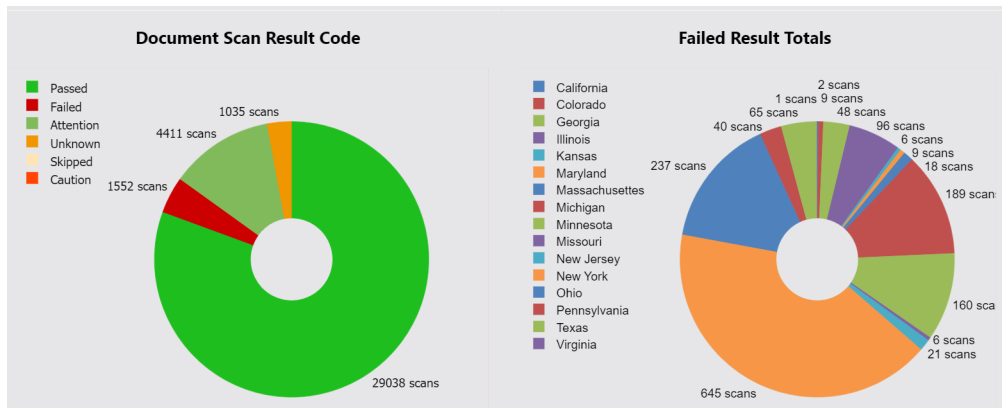

WHO BENEFITS FROM ENTERPRISE DASHBOARDS?

Any organization that operates more than one physical store or branch location can benefit from the PALIDIN Enterprise module add-on. This web-portal allows management teams to monitor all their installed systems from one convenient and centralized location.

HOW IT WORKS

Dashboards allow for powerful visualization of identity authentication & potential fraud patterns across an organization’s various store locations and other channels. Our dashboards display a summary of an organization’s authentication results and the respective ID scan transaction counts.

Document Authentication Distribution by Result & Failed Result Totals by State

The right-hand chart shows the distribution of all scans with a failed result, segmented by state. New York state for example, accounted for almost half of all documents with a failed result, across the whole company. Information such as this can help guide loss prevention and risk management teams in setting up policies and training employees on fraud prevention techniques.
