ID Document Authentication & Facial Liveness

The **PALIDIN** Solution

## IDENTITY **VERIFIED** IN A FEW EASY STEPS

PALIDIN Mobile allows you to authenticate government documents without the need of a desktop computer or document reader scanner. Simply use your mobile device (smartphone or tablet).

### ID DOCUMENT CHECK

Photo of ID is taken by the client  
ID is crosschecked in database

### FACIAL MATCH

Selfie is taken by customer  
"Liveness" check is performed  
Image is compared to photo ID

### IDENTITY AUTHENTICATED

Results are given instantly and sent only to your business

Pass Result = Good to Go

Fail Result = Fraud Prevented

## ID Document Authentication & Facial Liveness

**PALIDIN Mobile** uses the camera of a mobile device to scan the front and back of a customer's ID document. Our *document authentication engine* performs forensic-level tests to ensure the authenticity of the ID and cross-checks the personal data stored in the barcode against the printed information on the front.

✓ **Liveness Test:** Our optional facial recognition liveness test links a person to their ID by making sure that your remote customer matches the image printed on the ID and the data being submitted for authentication. This "liveness test" ensures a real person is taking the selfie and can detect whether flat photos, masks, or video images were being fraudulently used during the authentication process.

After customer ID is shown to be real or fake, **PALIDIN Enterprise** provides secure cloud storage for future reference and insightful analytics. PALIDIN Enterprise provides quick retrieval of ID data and images for your security team or authorities. Aggregated scans can reveal fraud activity and trends across your business by location & date.
